

DESIGN AND TECHNOLOGY PROJECT (MR.GALEA 4.1 PUGS)

On the 15th of February 2016, the parents of the 4.1 class were invited to school to help their children to design a model about 'Forces'.

The children were asked to bring a magnet, a small box, a small picture, a piece of string and some decorations for the project. They had to make a floating picture which was attached to a paper clip and a string inside a box.

The Design and Technology Project was successfully made and the children with their respective parents and teachers worked collaboratively to make this model. The children and parents were really pleased with their final product.

The parents are helping the children to cut out a face of their boxes.

The final product of the Design and Technology Project is seen behind the children and in front of their parents.
